This new release features an updated design, higher capacity, and improved performance compared to the previous generation.. Then, manually go to those places and delete the items This is SCARY stuff Kenny, my GUESS would be that these files are actually part of Mac OS X itself.. See if there are any bom files If so, open the Terminal app, type lsbom followed by a space and then drag the bom file into the window that pops up, and hit the return key.. It always keeps coming back, apparently reinstalling itself from someplace In the latest attempt, when I run WD Smartware Uninstaller and click 'uninstall,' the little icon immediate disappears from the menu bar, confirming that it is honestly trying to do something, but it then enters a peculiar state in which the barberpole spins endlessly and whatever it is trying to do never completes.

Once the window opens, put it into list view, and search for anything that has WD or Smartware in it.. 5 for mac I'm thinking they might needed to have the drive work as a drive Since the WD drive has both FireWire (IEEE 1394) and USB interfaces, I guess one could try just deleting, say, the USB files and seeing whether the drive now works only with FireWire, but--well, personally I am not touching ANYTHING in THAT directory.. Cng Di Ng Wd My Passport For Macbook ProI got an email from Western Digital warning of data loss when upgrading to Mavericks and recommending that WD Smartware be uninstalled, naturally I've been trying to do it.. Here's where I'm at I deleted com WesternDigital WDSmartWareD plist com wdc WDDMservice.. On rebooting, WD Smartware is there again Click on the Desktop, Finder->Go->Go to folder->enter /var/db/receipts/, and click the Go button.. Its sleek style is fun and fits comfortably in the palm of your hand, so you can easily take your treasured content everywhere you go.. A way to find out would be to see whether they exist on a recent-ish Mac OS X system that has never had a external Western Digital drive installed.. In this state, the 'WD Smartware Uninstall' window cannot be dragged, and clicking on on the application icon in the Dock does not bring it to the front..
